

SAFE, the European leader in the market of diets for laboratory animals

When everyone is just talking about acute crises in the food sector, SAFE is acting.

With more than 47 years of experience and in close cooperation with the world of research, SAFE is an uncontested international benchmark ...

... Our ISO 9001 certified industrial site at Augy (south of Paris) is unique in Europe: it is entirely dedicated to this laboratory activity and is totally in line with GMP and GLP requirements. It does not produce diet products for farms or zoos, nor does it manufacture pet foods. At the dietary, health and veterinary levels, this guarantees the absence of crossed contamination with "agrosupplied" diet or those of other origins.

All our diet products are baby food cereal-based. They are totally devoid of substances not desired for research applications (medicines, colorants, preservatives, anti-fungal agents, radioactivity, etc.) and traceability and analyses are total. SAFE products come with 1 to 2* years shelf life.

SAFE directly benefits from the scientific, analytical and technical know-how of the Evialis International Group (a world leader in nutrition-health).

To the same extent as the genetic factor in biomedical research, the feed factor is also very important: it must be maximally reliable and constant to preclude any drift in your studies. This is SAFE's commitment.

Faced with the increasingly important financial constraints of research, SAFE provides you with controlled diet products, not questionable but consistent with the needs of laboratory animals.

(*vacuum-packed)

DIET PRODUCTS

The following table summarises several diets of the SAFE product line

DIET	DESIGNATION		Proteins* (%)	Energy* (kCcal/kg)
A03	RATS, MICE, BREEDING		21.4	3200
A04	RATS, MICE, MAINTENANCE		16.1	2900
A04C		Controlled-Certified	16.1	2900
105	RATS, MICE, HAMSTERS		19.4	3000
110	RABBITS BREEDING		14.8	3100
112	RABBITS MAINTENANCE		12.3	2200
112C		Controlled-Certified	12.3	2200
114	GUINEA PIGS BREEDING		19.4	2700
114C		Controlled-Certified	19.4	2700
106	GUINEA PIGS MAINTENANCE		15.8	2600
107	MONKEYS		18.8	2400
107C		Controlled-Certified	18.8	3400
125	DOGS MAINTENANCE		21.1	3000
125C3		Controlled-Certified	21.1	3000
127	MINI-PIGS MAINTENANCE		13.6	2800

* Average values

All our products are irradiated sack-by-sack (irradiation of entire pallets is prohibited). These diet products are also available vacuum-packed and (or) irradiated at 10, 25 or 40 kGy. Unit packages weigh 10 kg or less. For more specific data or other information, log onto our site:

www.safe-diets.com

Sacks of Controlled-Certified diet products are individually numbered. They are released only if the results of more than 130 analysis points are compliant (physicochemical, bacteriology, mycotoxins, etc.). This high level of traceability and analytical compliance is unique in this industry.

SAFE also distributes a complete line of "sustainable development" cage bedding and hygiene products adapted to laboratory animal facilities.

BEDDING

Did you know?

Bedding represent an important risk factor for your animal facilities.

They are manufactured from enormous masses of wood that cross paths from the time trees are felled to the time the bedding is manufactured. These origins and health risks can accumulate on arrival in your animal facilities and thereby influence the environment of your studies.

The sterilisation option is then merely a factor for the reduction of the initial number of micro-organisms! For your protection, SAFE selects and receives only bedding compliant with its specifications and contract conditions.

All trees cut down are replanted. SAFE uses no product obtained from the transformed or treated wood industries (pallets, waste, etc.). SAFE neither packages nor transports bedding for zoos, husbandry or stud farms. All bedding are packaged with the same standards as those applied to diet (control of temperature and humidity) and with the same drastic health plan. This is done in a sealed zone to prevent intrusion (epizooty-type source of possible contamination).

We can provide different "sustainable development" bedding (poplar, fir, corn), irradiated and/or vacuum-packed.

They can be delivered at the same time as your diet.

Do not hesitate to contact us!

SPECIAL DIET

The Special Diet division of SAFE has received all European food and health accreditations. This division is supervised by a pharmacist and a team of specialised engineers and scientists. Do not hesitate to contact us at

www.safe-diets.com

SAFE AND YOU

SAFE exhibits at the LASA WINTER MEETING (UK), the AALAS (USA), CALAS (Canada) and also at the FELASA and other large European trade fairs and shows.

You can come and visit us any time.
The SAFE team will welcome you warmly!

For any questions or practical information, contact ASTON-PHARMA, our United Kingdom distributor.

THE SAFE ACADEMY

Did you know?

On our French industrial site AUGY (South of Paris) is in the region of Burgundy, SAFE organises regular training sessions on feeding laboratory animals. why not you? You too can participate!

Do not hesitate to contact us via Aston-Pharma UK (info@aston-pharma.com) and SAFE will arrange your visit.
