

PACKAGING

Our packaging meets your needs and **sanitary concerns**. There are several possible solutions, among which you'll find single and double paper bag, paper bag in plastic pouch, boxed vacuum-packed. All solutions have an "easy open" design and are marked with the **traceability** and product information. Diets are packed in 10 ; 5 or 1 kg.

► BAGS FOR DIETS

STANDARD DIET
Paper bag
10 kg
"Easy open"

CERTIFIED DIET
Double paper bag
10 kg
"Easy open"

Diet + 60% water
Cup of 100 g

GEL DIET WATER
98% water, thermoreversible
Cup of 100 g

► **CUSTOM DIETS**

EXAMPLE
of custom diets

DIFFERENT TYPES OF PACKAGING
are possible for custom diets on demand:
1 kg, 3 kg or 5 kg.

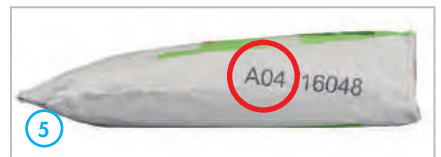

► **IRRADIATION PROOF**

Diets could be irradiated at 10 ; 25 or 40 kGy. These are guaranteed as a **MINIMAL dose** in all part of the product. **All irradiated products are processed individually**, i.e. : box by box (irradiation of a full pallet at the same time is prohibited). To ensure the diet quality, and to guarantee its sanitary integrity after sterilization until the use in your lab, we recommend that the irradiated diets from 25 kGy be **vacuum packed**.

► **TRACEABILITY**

It's important you can see all the traceability we set up in our process:

1. Label elements of diets in bag
2. Traceability proof on bag
3. Full plastic pallet
4. All breeding diets are with a red lateral marking
5. All others diets are with a black lateral marking

Irradiation is possible at 10, 25 or 40 kGy
Proof on each bag

Irradiation proof on **packaging diet** and on **the box**
