Definition

Gel Diet Water is a nutritional solution used for animal hydration.

Product Objective

Gel Diet Water has 98% water content and is used to provide animals with an easy-to-consume water source. Gel Diet Water can be distributed during transport or during stressful periods such as a post-operative episode.

Gel Diet Water can be distributed provisionally (2 to 7 days) to animals in a stressful situation or a recovery phase as a complement to granulated diets.

Directions for use

Distribution period:

- ✓ 1 day before the transport phase for acclimatization, then throughout transport.
- ✓ 72 hours for animals weakened by protocol conditions; replenishment varies depending on cage type (particularly cage ventilation).

Gel Diet Water can be distributed

- ✓ Placed directly on the cage floor, in the open package,
- ✓ Removed from the packaging and placed directly in the cage dieting dish, or on the cage floor.

Quantity consumed per day: daily consumption depends on species and strain.

Distribution method: ad libitum or rationing depending on experimental protocols. Standard diet (e.g. A04 or A03 granules) can be kept within animals' reach.

Storage: the product in its closed, original packaging can be stored for 12 months in a dark area at room temperature. Can be stored at 4°C.

After opening, the product can be kept for 5 days maximum.

About this product

Solid paste with 98% water content, packaged in individual, protectively sealed tubs. Irradiated at 10 kiloGrays.

- ✓ 100 g tub, sold in packs of 60. The tubs are grouped in quantities of 30 in a hermetically sealed envelope
